

922 CONTROLLER & HEATING ELEMENTS

FEATURES & BENEFITS

- Microprocessor based control module features the same logic as our Gas Hot Air blowers
- Available in a wide range of voltages
- Up to 12 switches can be protected with one cabinet
- High/low operation allows the unit to go into half wave setting to save electricity when a programmable rail temperature set point is reached
- Units can be turned on locally, by dispatch thru a contact closure, by snow detection, or by Rail-NET®
- Fault detection to disable output upon heating element circuit failure
- Single ended elements with plugs for quick disconnect available in various lengths, wattages, and voltages
- Many common sizes of heating elements ship from stock
- Compatible with Rail-NET® and other remote monitoring systems
