

SNOW DETECTION

FEATURES & BENEFITS

- Point snow detector mounts in the web of the rail to detect blowing snow or snow dragged in by a train
- Operates reliably in -40°F
- Standard pyramid style units mount on switch heater to detect falling snow
- Quick disconnect plugs allow the snow detector to be changed out if it is damaged without running a new cable
- Snow detectors are available in a wireless version and communicate back to the switch heater via radio
- Compatible with all switch heater manufacturers
